

EnGage Menu enables users to quickly and easily create high quality menus, combo and price boards. The template driven system enables users to create a library of reusable menu items and to utilize them across a variety of different menus. EnGage Menus can integrate images, video and animation. Customers can select from a variety of pre-built menu templates or create their own.

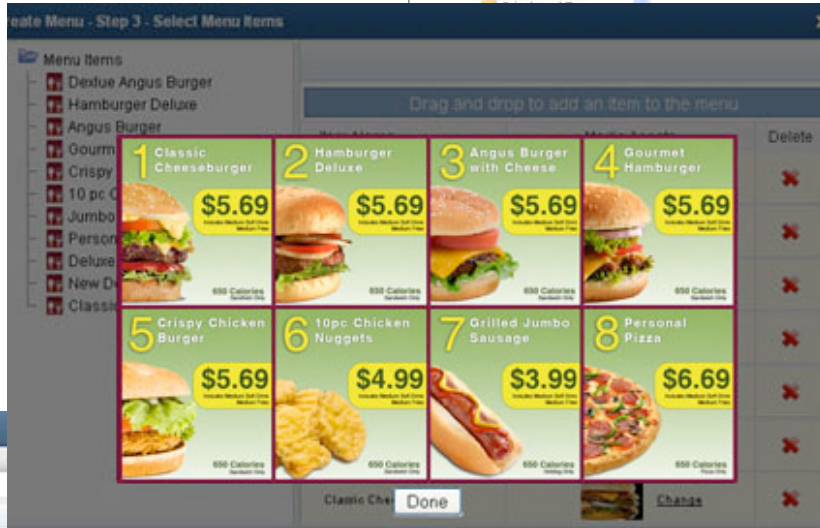

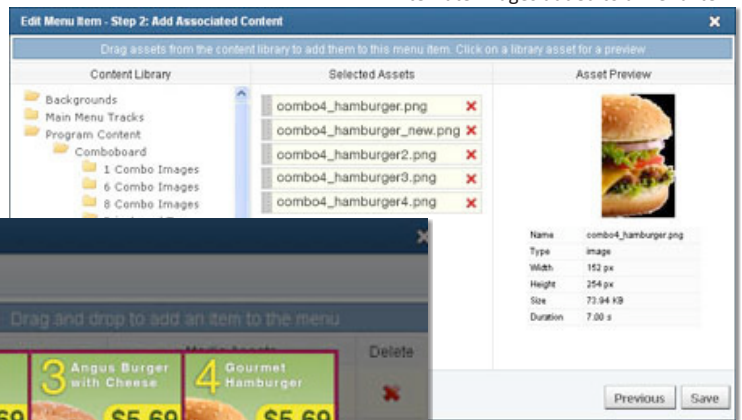

The EnGage Menu system also features a powerful scheduling tool that enables the creation of menus that change based on the time of day, day of week, or within a specific date range.

EnGage’s technology features a full web-services API through which pricing and inventory can be adjusted on a per store basis to ensure that the right items are promoted at the right price. The data format stored for each menu item is customizable, enabling the creation of menus that feature, for instance, region-specific nutritional labelling.

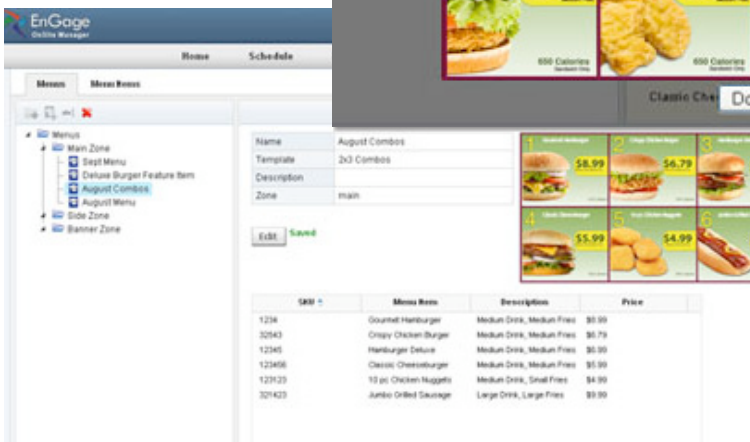

EnGage Menu also provides:

- User specific menu fields such as nutrition information
- Full featured API access
- Customizable site branding
- User access controls for many different users and menus
- User Customizable templates
